### **DETAILED ACTION**

#### CLAIMS

### Summary

Claim 1 is the independent claim under consideration in this Office Action.

Claims 2-23 are the dependent claims under consideration in this Office Action.

The claims are objected to because they include reference characters which are not enclosed within parentheses.

### **Character Numbers**

Reference characters corresponding to elements recited in the detailed description of the drawings and used in conjunction with the recitation of the same element or group of elements in the claims should be enclosed within parentheses so as to avoid confusion with other numbers or characters which may appear in the claims. See MPEP § 608.01(m). In claim 15, line 3, "206" should be enclosed within parenthesis.

### Claim Rejections - 35 U.S.C. § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 10-21 and 23 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number:

10/539,347 Art Unit: 3765

Referring to claim 10, line 4, there is no proper antecedent basis for the words "the interior of said means for the production of dry steam".

Referring to claim 11, lines 2-3, there is no proper antecedent for the words "said means for production of dry steam" and "said perforations".

Referring to claim 23, the scope of this claim is unclear.

# Claim Rejections - 35 U.S.C. § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2,4,22 and 23 are rejected under 35 U.S.C. § 102(b) as being anticipated by Ehrmann et al. (3,077,900).

Ehrmann et al. teach a steam iron comprising a steam powered ejection nozzle which sprays a combination of steam and water vapor. The iron includes a first and second conduit. the first conduit comprises a main bore 28 which rises from the top section of the containment chamber 17 and the second conduit connects with 28 but is passed immediately over the end 132 of a third passage 32. The second passage passes over 132 and into the space of valve body 24 and out spray nozzle 41. Water is passed through the third passage 32 and steam is passed through the first passage 28 and then the second passage causing a drop in pressure and mixing and drawing water from the third passage 32 and exiting the humidified steam mixture out the spray

Application/Control Number:

10/539,347

Art Unit: 3765

nozzle. A valve body 33 having two positions is provided for allowing the spraying where in one position it does not allow a spray and in another allows the spray mixture to come out. The valve is connected to an external control switch 44 which is user actuated and located outside the iron housing for causing a temporary high-pressure steam driven spurt of humidified steam.

### ALLOWABLE SUBJECT MATTER

Claims 10-21 would be allowable if rewritten or amended to overcome the rejection under 35 U.S.C. § 112.

Claims 3 and 5-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### PERTINENT CITATIONS

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sardeson illustrates a steam iron including a steam spray. Ching et al. '197 illustrate a spray for an iron including spraying a mixture of two fluids from two sources. Alamazar et al. illustrate a steam iron including a separate spray and steam from separate reservoirs. Ching et al. '295 illustrate a steam iron including a separate steam generating stand. Wong et al. illustrate a steam iron including a pump for driving the steam exiting.

## **INQUIRIES**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ismael Izaguirre whose telephone number is (571) 272-4987. The examiner can normally be reached on M-F (8:30-6:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Welch can be reached on (571) 272-4996. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
